MOHAMMED FERWANA

Backend Engineer · Node.js, Express, MongoDB

Gaza, Palestine • mohammedferwana2@gmail.com • linkedin.com/in/mohammed-ferwana • github.com/hammoudFerwana

SUMMARY

Backend Engineer working in Node.js, Express and MongoDB. Sole backend engineer on Sawn, a multi-tenant motor-insurance claims platform: a 10-state claim lifecycle with atomic transitions, tenant isolation from the JWT, per-tenant claim numbering, and 616 passing tests. Computer Systems Engineering student at Al-Azhar University (CGPA 93.3).

EXPERIENCE

Sawn (formerly InsurFlow) — Sole Backend Engineer 2026

Multi-tenant B2B SaaS for motor-insurance claims. Team of four: 2 frontend, 1 mobile, 1 backend. API live on Render with MongoDB Atlas.

- Designed the 10-state claim lifecycle: every transition is one atomic findOneAndUpdate filtered by organizationId and expected status; invalid moves return 409.
- Enforced tenant isolation: organizationId comes from the JWT, never from the client, and leads every compound index; cross-tenant access returns 404 to prevent ID enumeration.
- Built per-tenant claim numbers (CLM-<ORG>-0001) from an atomic counter; a test creates 15 claims concurrently and checks numbers 1 to 15 with no gaps.
- Found and fixed a project-wide Express 5 bug: req.query is a getter, so validation middleware silently skipped Joi transforms.
- 616 tests passing in 39 suites (Jest, Supertest, mongodb-memory-server; run 1 Oct 2026).

Stack: Node.js, Express 5, MongoDB, Mongoose, Joi, JWT, Cloudinary, FCM, Jest

TAQAT (internship) — Backend Developer & Team Leader, TeamLine 2026

TeamLine: team workspace platform with boards and tasks.

- Led the team as Team Leader and built the backend.
- Implemented JWT authentication with bcrypt and workspace roles (Lead, Member, Viewer) across 20+ protected endpoints.
- Built boards, tasks, task comments, time tracking, real-time task updates and version-guarded task moves.

Stack: Node.js, Express.js, MongoDB, Mongoose, JWT

Aristo Software — Backend Developer Trainee May 2026 – Present

Khireej Qader program (90 hours).

- Building backend endpoints with Node.js and Express.
- Writing MongoDB queries and data models.

TRAINING

Gaza Sky Geeks — Market Ready Developer program In progress, completing Nov 2026

Masar Tech — Backend Engineering Bootcamp, Batch 2 Accepted, 2026

Udemy — The Complete Node.js Developer Course (Jonas Schmedtmann) 2024

EDUCATION

Al-Azhar University, Gaza — B.Sc. Computer Systems Engineering 2022 – 2027 (expected)

CGPA 93.3

Coursework: Operating Systems, Data Structures & Algorithms, Database Systems, Advanced Database Systems, Computer Networks, Software Architecture, System Analysis & Design.

SKILLS

Languages:	JavaScript, SQL, Java
Backend:	Node.js, Express.js (Express 5), REST API design, Joi validation
Databases:	MongoDB, Mongoose; PostgreSQL and Sequelize (team projects)
Security:	JWT, bcrypt, role-based access control, rate limiting, Helmet, CORS
Testing:	Jest, Supertest, mongodb-memory-server
Tools:	Git (Gitflow, Conventional Commits), GitHub Actions, Docker (basics), Postman

LANGUAGES

Arabic (native), English (professional working proficiency)
