MOHAMMED FERWANA

Backend Engineer · Node.js, Express, MongoDB

Email: mohammedferwana2@gmail.com • **Location:** Gaza, Palestine (Remote / Async Ready) • **GitHub:** github.com/hammoudFerwana •

LinkedIn: linkedin.com/in/mohammed-ferwana

PROFESSIONAL SUMMARY

Backend Engineer working in Node.js, Express and MongoDB. I build REST APIs, claim lifecycle state machines, multi-tenant data isolation, JWT authentication with role-based access control, and automated Jest test suites. Computer Systems Engineering student at Al-Azhar University, Gaza.

TECHNICAL SKILLS & COMPETENCIES

Backend Runtimes:	Node.js, Express.js, RESTful API Design, Modular Architecture
Databases & Storage:	MongoDB Atlas, PostgreSQL, Mongoose, Compound Indexing, Data Modeling
Architecture & Security:	Finite State Machines (FSM), Multi-Tenant Isolation, JWT, RBAC, Data Validation
Testing & Quality:	Jest, Supertest, mongodb-memory-server, Integration Testing, Continuous Integration (CI)
DevOps & Tools:	Docker (basics), Gitflow, GitHub Actions, Postman

PROFESSIONAL EXPERIENCE & TRAINING

Backend Developer Trainee — Aristo Software (Khireej Qader Program) — May 2026 – Present · Remote

- Backend Developer Trainee through the Khireej Qader program.

Backend Developer & Team Leader — TAQAT (TeamLine Platform) — 2026 · Remote

- Backend Developer and Team Leader during the TAQAT internship, building TeamLine, a team workspace platform.
- Designed REST APIs with JWT authentication and workspace role-based access control.
- Built real-time task updates and version-guarded task moves.

Backend Engineering Bootcamp, Batch 2 — Masar Tech — 2026 · Remote

- Accepted to Masar Tech Backend Engineering Bootcamp, Batch 2 (2026).

Market Ready Developer Program — Gaza Sky Geeks (GSG) — 2023 – 2024 · Gaza, Palestine

- Completed the Market Ready Developer program.

FEATURED ENGINEERING SYSTEMS & PROJECTS

Sawn (formerly InsurFlow) — Multi-Tenant B2B Motor Insurance Claim Platform — Sole Backend Engineer · 2026

- **Finite State Machine:** Designed and implemented a deterministic 10-state claim lifecycle state machine preventing invalid status mutations with explicit HTTP 409 conflict handling.
- Tenant-scoped data isolation: organizationId comes from the JWT and leads every compound index; cross-tenant access returns 404.
- Tenant-scoped claim numbers (CLM-<ORG>-0001) from an atomic per-organization counter; an automated test creates 15 claims concurrently and checks numbers 1 to 15 with no gaps.
- 616 tests passing in 39 suites (Jest, Supertest, mongodb-memory-server; run 1 Oct 2026).

TeamLine — Collaborative Team Workspace Platform — Backend Developer & Team Leader · 2026

- Built modular REST API services for workspace membership, task assignment, and activity tracking.

EDUCATION

B.Sc. in Computer Systems Engineering — Al-Azhar University (CGPA 93.3) — 2022 – Expected 2027

- Core Coursework: Operating Systems, Data Structures & Algorithms, Database Management Systems, Computer Networks, Software Engineering, Discrete Mathematics.
